

# WJB搅拌机

WJB Mixers

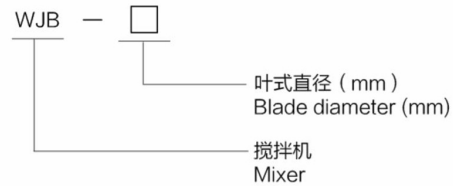

## 用途

WJB系列搅拌机同样适用于给水排水过程的絮凝阶段。此搅拌机可以在更短的时间内使污水与药剂反应更加充分，并根据水质的不同可选用不同材质的搅拌机轴及桨叶，以满足污水的复杂性。

## 主要组成部分

减速机、基座、桥架、传动轴、三叶桨叶等。

## 型号意义 Meaning of the model

## 技术优势

- ▶ 搅拌轴材质可根据污水选择碳钢玻璃钢防腐、304搅拌轴。
- ▶ 具有水头损失小、适应水量变化、应用范围广等优点。

## Technical advantages

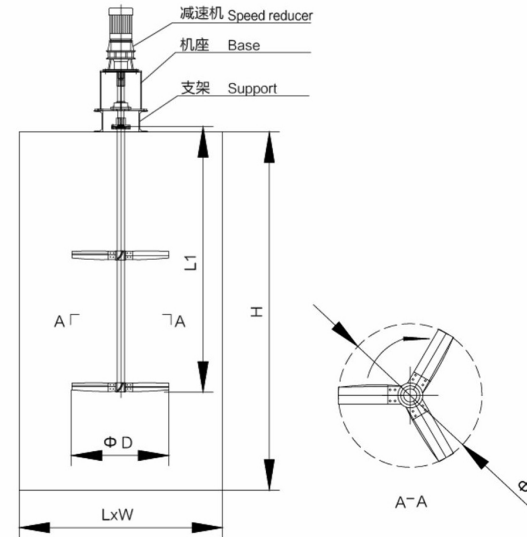

- ▶ The mixing shaft material can be chosen from carbon steel, GRP, corrosion-resistant and 304 mixing shaft according to the wastewater.
- ▶ Small water head loss, capable of adapting to the water quantity change, and wide scope of application.

## Use

WJB series mixer also applies to the flocculation stage in water supply and drainage. This mixer can make more sufficient reaction between wastewater and chemical agent within a shorter time, and the mixer shaft and blade of different materials can be chosen according to the water quality, to meet the complexity of the wastewater.

## Main components

Speed reducer, base, bridge, drive shaft, and three-leaf blade and so on.
